

$$x(t) = A_0 e^{-t/\tau} \cos(2\pi f t + \phi) + c$$

phase-coherent single-exponential model used by every coherent fit

constant f

drifts 1.2 / 0.2 mHz
during the decay

physics to report

single τ

local Q runs 72k to 191k
with amplitude

physics to report

decays to zero

settles at ≈ 17 cycles
of driven oscillation

nuisance for fitting

broadband noise: 1.3–1.9 cycles RMS against a 600-cycle release (SNR ≈ 400)
